TECH TIP

The 8x8 and 10x10 scale base sub-platters are attached to the loadcells through the use of two 1/4 x 20 phillips flat head screws. If these screws need to be replaced for any reason it is vital that they are replaced with the same type screws. If the same type screws are not used there is the possibility that the top platter will not sit properly on the sub-platter which in turn could cause the scale to not weigh properly.

Team Member Hobbies

WeighTech team member Roger Brigance spends some of his time away from WeighTech enjoying his hobby of restoring cars. Shown below is a 1975 Peterbilt truck that he and his son Eric spent the last 18 months restoring. The truck was purchased from a local rock crusher and that was where the fun began. They started by using the frame from a 1999 Ford F550 and several Ford 600 running boards that had to be cut down to make the final running boards. Several of the other parts of the truck including the bed were hand built. They used a 1998 8.3 liter Cummins engine and a 10 speed Road Ranger transmission. To finish off the project they painted the truck Chevrolet Competition Red and the fenders and running boards Charcoal. To see more pictures of the truck in the rebuilding stages go to our WeighTech Facebook page.

Who We Are

WeighTech has over 20 years of experience in the design, development, and service of scales and specialty equipment. WeighTech has earned its reputation as a trusted supplier of reliable and affordable products that meet and exceed customer expectations.
